

# Insight Creates Value

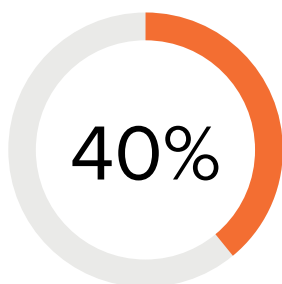

# WeldEye — Insight Creates Value

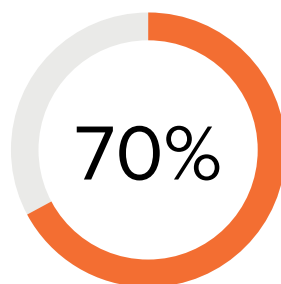

WeldEye is a universal software solution to manage welding production. A balanced combination of software, hardware and service, WeldEye creates value through insight into WPS compliant welding quality, personnel qualifications, and much more. It reduces overhead costs by simplifying your documentation process and reducing repair rate. The software is available globally and compatible with any brand's welding equipment. As a cloud service it provides a simple way to control your welding production anywhere in the world, regardless of your location.
